### **New technologies in support of creativity and innovation**

There are not yet any specific initiatives focused directly on young people in this field.

There is methodological support in the scope of implementing the Strategy of Digital Education that includes among other things the pillar 'Support for integration of technologies to schools', which contains the following areas of methodological support in the area of digital technologies:

- 6.3 Support of ICT methodology specialists and their work;
- 6.4 Methodological support of integration of digital technologies into teaching and school life;
- 6.5 Expert and methodological support of development of infrastructure of the digital environment of schools for the founders and management of schools;
- 6.6 Creation of a network of ICT methodology specialists on a regional, or alternatively municipal, level.

For media literacy and use of media by young people see [Chapter 6.8](#).

### **Facilitating access to culture through new technologies**

There are not yet any specific initiatives focused directly on young people in this field.

For media literacy and use of media by young people see [Chapter 6.8](#). or [New technologies in support of creativity and innovation](#).

For the general population, there is a vision of supporting the development of an eCulture within the Strategic

Documents on Culture – enable the use of cultural content for new scientific knowledge by converting it into electronic form, introduction of a mandatory copy of electronic publications and preservation of national cultural heritage created in electronic form.
